### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

#### **IN THE DRAWING:**

- Figures 27-29 have been labeled as "Prior Art". *See attachment.*

#### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance: Claims 1-25 are allowable over the prior art of record because none of the prior art whether taken singularly or in combination, especially when these limitations are considered within the specific combination claimed, to teach: a memory device comprising at least one read/write control signal line, among others as claimed in independent claim 1, for transmitting a read/write control signal to a memory cell, wherein the write control signal and read control signal are controlled so as not to be activated at the same time; a reset signal, among others as claimed in independent claim 21, activated to set a state of storage element to have a desirable value for a period other than the reading and writing operation; a NOT signal of AND of the write control signal and inverted write signal, among others as claimed in independent claim 24, connected to a first source of a transistor constituting a second inverting logic gate, and an AND signal of the write control

signal and the write signal is connected to a second source of the transistor constituting the second inverting logic gate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### *Conclusion*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Sawada (6,014,340) disclose a synchronous semiconductor memory device having internal circuitry enabled only when commands are in normal sequence.
